## Hepsera

### Description

#### Hepsera (adefovir)

---

#### Background

Hepsera (adefovir) is an acyclic nucleotide analog of adenosine monophosphate which is phosphorylated to the active metabolite adefovir diphosphate by cellular kinases. Hepsera inhibits Hepatitis B virus (HBV) DNA polymerase by competing with the natural substrate deoxyadenosine triphosphate and by causing DNA chain termination after its incorporation into viral DNA (1).

#### Regulatory Status

FDA-approved indication: Hepsera is indicated for the treatment of chronic hepatitis B virus (HBV) infection (1).

#### Related policies

### Policy

*This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.*

Hepsera may be considered **medically necessary** for patients with Hepatitis B infection who have had an inadequate response, intolerance, or contraindication to the generic.

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	July 1, 2022
<b>Subsection:</b>	Anti-Infective Agents	<b>Original Policy Date:</b>	January 1, 2021
<b>Subject:</b>	Hepsera	<b>Page:</b>	2 of 3

---

Hepsera may be considered **investigational** for all other diagnoses.

## Prior-Approval Requirements

### Diagnosis

Patient must have the following:

Hepatitis B (HBV) infection

- a. Patient **MUST** have tried the preferred product (generic Hepsera: adefovir) unless the patient has a valid medical exception (e.g., inadequate treatment response, intolerance, contraindication)

---

## Prior – Approval *Renewal* Requirements

Same as above

### Policy Guidelines

## Prior - Approval Limits

**Duration**      12 months

## Prior – Approval *Renewal* Limits

Same as above

### Rationale

#### Summary

Hepsera (adefovir) is an acyclic nucleotide analog of adenosine monophosphate which is phosphorylated to the active metabolite adefovir diphosphate by cellular kinases. Hepsera inhibits Hepatitis B virus (HBV) DNA polymerase by competing with the natural substrate deoxyadenosine triphosphate and by causing DNA chain termination after its incorporation into viral DNA (1).

Prior approval is required to ensure the safe, clinically appropriate and cost-effective use of Hepsera while maintaining optimal therapeutic outcomes.
