Kepivance

Description

Kepivance (palifermin)

Background

Kepivance (palifermin) is a recombinant human keratinocyte growth factor that works at the cellular level to help protect patients with hematologic malignancies undergoing high-dose chemotherapy and/or radiation followed by autologous bone marrow transplant from severe oral mucositis. Kepivance reduces the incidence and duration of severe oral mucositis in these patients by protecting the epithelial cells that line the mouth and throat from the damage caused by chemotherapy and radiation and by stimulating the growth and development of new epithelial cells to build up the mucosal barrier (1).

Regulatory Status

FDA-approved indication: Kepivance is a mucocutaneous epithelial human growth factor indicated to decrease the incidence and duration of severe oral mucositis in patients with hematologic malignancies receiving myelotoxic therapy requiring autologous hematopoietic stem cell support. Kepivance is indicated as supportive care for preparative regimens predicted to result in \geq WHO Grade 3 mucositis in the majority of patients (1).

Limitation of Use:

The safety and efficacy of Kepivance have not been established in patients with non-hematologic malignancies. Kepivance is not recommended in patients receiving allogeneic hematopoietic stem cell support or for use with melphalan 200 mg/m² as a conditioning regimen (1).

Related policies

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Kepivance may be considered **medically necessary** in patients with severe oral mucositis or in patients at risk of developing \geq WHO Grade 3 mucositis and if the conditions indicated below are met.

Kepivance may be considered **investigational** for all other indications.

Prior-Approval Requirements

Diagnosis

Patient must have the following:

Severe oral mucositis or at risk of developing \geq WHO Grade 3 mucositis

AND ALL of the following:

1. Hematologic malignancy (non-Hodgkin's lymphoma, Hodgkin's lymphoma, acute myelogenous leukemia (AML), acute lymphoblastic leukemia (ALL), chronic lymphocytic leukemia (CLL), chronic myelogenous leukemia (CML), acute monocytic leukemia (AMoL), or multiple myeloma)
2. Receiving or scheduled to receive myelotoxic therapy
3. Scheduled autologous hematopoietic stem cell transplantation

Prior – Approval *Renewal* Requirements

Same as above

Policy Guidelines

Pre - PA Allowance

Rationale

Summary

Kepivance (palifermin) is a mucocutaneous epithelial human growth factor indicated to decrease the incidence and duration of severe oral mucositis in patients with hematologic malignancies receiving myelotoxic therapy requiring autologous hematopoietic stem cell support. Kepivance is indicated as supportive care for preparative regimens predicted to result in \geq WHO Grade 3 mucositis in the majority of patients. The safety and efficacy of Kepivance have not been established in patients with non-hematologic malignancies. Kepivance is not recommended for use in patients receiving allogeneic hematopoietic stem cell support or with melphalan 200 mg/m² as a conditioning regimen (1).

Prior authorization is required to ensure the safe, clinically appropriate and cost-effective use of Kepivance while maintaining optimal therapeutic outcomes.
