Impoyz Cream 0.025% (clobetasol propionate)	Vanos* Cream 0.1% (fluocinonide)
Lidex E Cream 0.05% Lidex Gel, Ointment, Solution, Cream 0.05% (fluocinonide)	Verdeso Foam 0.05% (desonide)

*Prior authorization for certain non-covered formulations applies only to formulary exceptions

Section:	Prescription Drugs	Effective Date:	July 1, 2022
Subsection:	Topical Products	Original Policy Date:	January 1, 2020
Subject:	Topical Corticosteroids	Page:	3 of 24

Background

The intent of the criteria is to provide coverage consistent with product labeling, FDA guidance, standards of medical practice, evidence-based drug information, and/or published guidelines. Pharmacy topical products have the potential for misuse. Misuse of these topical products not just over the face but also for any skin problem is quite common. It is very important to inform patients about the possible complications of these drugs and the extent of the problem because of irrational use of these drugs. The criteria was created in order to limit existing patients that have been taking doses above the FDA recommended limits and get them down to appropriate levels. This criteria is also intended to help prevent use of topical corticosteroids in topical foot baths (1-65).

Regulatory Status

FDA approved indications: (1-65)

1. Alclometasone dipropionate, amcinonide, betamethasone dipropionate, betamethasone valerate, clobetasol propionate, clocortolone pivalate, desonide, desoximetasone, diflorasone diacetate, fluocinolone acetonide, fluocinonide, flurandrenolide, fluticasone propionate, halcinonide, halobetasol propionate, hydrocortisone, hydrocortisone acetate, hydrocortisone butyrate, hydrocortisone probutate, hydrocortisone valerate, mometasone furoate, prednicarbate, triamcinolone acetonide are indicated for the relief of the inflammatory and pruritic manifestations of corticosteroid-responsive dermatoses.
2. Clobetasol Propionate Emollient Base Cream, Clobex Shampoo, Clobex Lotion, Clobex Spray, Derma-Smooth/FS (Scalp) Oil, Impoyz Cream, Olux Foam, Sernivo Spray, Topicort Spray, Ultravate Lotion are indicated for the treatment of psoriasis.
3. Cutivate Lotion, Derma-Smooth/FS (Body) Oil, Desonate Gel, Locoid Lipocream, Locoid Lotion, Verdeso Foam are indicated for the treatment of atopic dermatitis.
4. Capex Shampoo, Locoid Solution are indicated for the relief of the inflammatory and pruritic manifestations of seborrheic dermatitis.

The Pre-Prior Authorization (Pre-PA) allowance quantity limit for all topical corticosteroids (TCS) is based on the average American Academy of Dermatology (AAD) estimation for twice daily dosing over 9% body surface area (BSA) for acute treatment and for maintenance therapy,

Section:	Prescription Drugs	Effective Date:	July 1, 2022
Subsection:	Topical Products	Original Policy Date:	January 1, 2020
Subject:	Topical Corticosteroids	Page:	4 of 24

taking into consideration the available package sizes across the TCS class. The three month limit will be 460gm or 460mL per month, which is 3 times the one month limit (59-61). If the quantity requested exceeds the Pre-PA quantity limit, the claim will reject with a message indicating that a prior authorization is required.

The Prior-Authorization (PA) quantity limit for all topical corticosteroids (TCS) will be 240gm or 240mL per month which is based on the average AAD estimation for up to 18% BSA for acute treatment and for maintenance therapy, or for more frequent dosing (up to four times daily) or longer duration of treatment, taking into consideration the available package sizes. The three month limit will be 720gm or 720mL (59-61).

No universal standard exists for quantity of application, although suggested methods include use of the adult fingertip unit (the amount from the distal interphalangeal joint to the fingertip, or approximately 0.5 grams (gm), being applied over an area equal to 2 adult palms), following the rule of 9's that measures the percent affected area, and use of charts that propose amounts based on patient age and body site (59-61).

In adults, the rule of nines is used as a rough indicator of % BSA. Palmar hand surface is approximately 1% BSA (59-61):

Anatomic Surface	% of Body Surface
head and neck	9%
anterior trunk	18%
posterior trunk	18%
arms, including hands	9% each
legs, including feet	18% each
genitalia	1%

Quantity for 1% BSA, suggested AAD estimation:

- Grams per application:
 - 0.5gm per application over 2 palms (1% BSA per palm) = 0.25gm per application over 1% BSA
- Applications per month:
 - For a month supply, at 2 weeks acute daily treatment (14 days) and maintenance twice weekly (or gradual reduction) (6 days) therapy at 2 applications per day = (14+6) days x 2 per day = 40 applications per month
- Grams per month for 1% BSA:

Section:	Prescription Drugs	Effective Date:	July 1, 2022
Subsection:	Topical Products	Original Policy Date:	January 1, 2020
Subject:	Topical Corticosteroids	Page:	5 of 24

- At 0.25gm per application over 1% BSA x 40 applications per month = 0.25gm x 40 = 10gm per 1% BSA per month

Since manufacturer package sizes may vary, it is the discretion of the dispensing pharmacy to fill quantities up to these quantity limits. In such cases the filling limit and day supply may be less than what is indicated. For example, Pandel is available as an 80gm tube, the initial limit is set at 460gm as a 90 day supply, therefore if dispensed as 240gm this may be considered less than a 90 day supply (59-65).

Related policies

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

The topical products included in this policy may be considered **medically necessary** in patients with an FDA-approved indication supporting the use of topical product and if the conditions indicated below are met.

The topical products included in this policy may be considered **investigational** in patients for all other indications.

Prior-Approval Requirements

Diagnosis

Patient must have the following:

1. FDA-approved indication supporting the use of topical product
2. Requested medication is **NOT** being used in a footbath

Prior – Approval *Renewal* Requirements

Same as above

<p>➤ The Prior-Approval quantity limit with <u>approved formulary exception</u> allows for the American Academy of Dermatology (AAD) recommended dosage.</p> <p>➤ Eligible patients are allowed a PA for each requested *ingredient listed above.</p>					

Duration 6 months

Prior-Approval *Renewal* Limits

Same as above

Rationale

Summary

The criteria was created in order to limit existing patients that have been taking doses above the American Academy of Dermatology (AAD) recommended limits and get them down to appropriate levels. This will help eliminate inappropriate use of these medications while still providing adequate relief to patients (1-65).

Prior authorization is required to ensure the safe, clinically appropriate and cost-effective use of the topical products included in this policy while maintaining optimal therapeutic outcomes.

Policy History

Date	Action
December 2019	Addition to PA – QL established to limit foot bath use/waste
January 2020	Removed Duobrii, Bryhali, and Lexette from policy to add to Topical Products with Quantity Limits policy. Pre-PA quantity changed to 460/90 from 360/90
March 2020	Annual review
June 2020	Addition of Halog Solution
September 2020	Annual review
December 2020	Trianex and Vanos require formulary exception + PA
March 2021	Annual review
April 2021	Addition of Impeklo Lotion. Prior-authorization quantity limit increased to 720/90 from 460/90. Added requirement indicating it cannot be used in footbaths. Changed criteria to allow for renewals and changed approval duration to 6 months for both initiation and renewal
June 2021	Annual review
May 2022	Revised Pre-PA and PA quantity charts to allow patients to receive multiple corticosteroids up to the allowed limits
June 2022	Annual review. Removed fluocinonide 0.1% gel, ointment, and solution due to not being available in the market. Also removed halobetasol aerosol foam 0.05% as it is included in the Topical Products with Quantity Limits policy

Keywords

This policy was approved by the FEP® Pharmacy and Medical Policy Committee on June 16, 2022 and is effective on July 1, 2022.
