Hetlioz

Description

Hetlioz (tasimelteon)

Background

Hetlioz (tasimelteon) is a melatonin receptor agonist used to treat certain sleep disorders. Hetlioz is an agonist at the melatonin MT₁ and MT₂ receptors which are thought to be involved in the control of circadian rhythms (1).

Regulatory Status

FDA-approved indication:

Hetlioz capsules are indicated for the treatment of: (1)

- Non-24-Hour Sleep-Wake Disorder (Non-24) in adults
- Nighttime sleep disturbances in Smith-Magenis Syndrome (SMS) in patients 16 years of age and older

Hetlioz LQ oral suspension is indicated for the treatment of: (1)

- Nighttime sleep disturbances in SMS in pediatric patients 3 years to 15 years of age

Dose adjustment is not necessary in patients with mild or moderate hepatic impairment. Hetlioz has not been studied in patients with severe hepatic impairment (Child-Pugh Class C).

Therefore, Hetlioz is not recommended for use in patients with severe hepatic impairment (1).

The safety and effectiveness of Hetlioz for the treatment of Non-24 in patients less than 18 years of age have not been established (1).

Section:	Prescription Drugs	Effective Date:	April 1, 2021
Subsection:	Central Nervous System Drugs	Original Policy Date:	April 18, 2014
Subject:	Hetlioz	Page:	2 of 5

The safety and effectiveness of Hetlioz for the treatment of nighttime sleep disturbances in SMS have not been established in patients less than 3 years of age (1).

Related policies

Orexin Antagonists, Rozerem, Sedative Hypnotics, Xyrem

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Hetlioz may be considered **medically necessary** for the treatment of Non-24-Hour Sleep-Wake Disorder or nighttime sleep disturbances in Smith-Magenis Syndrome and if the conditions indicated below are met.

Hetlioz may be considered **investigational** for all other indications.

Prior-Approval Requirements

Hetlioz capsules only

Diagnoses

Patient must have **ONE** of the following:

1. Non-24-Hour Sleep-Wake Disorder (Non-24)
 - a. 18 years of age or older
 - b. Total blindness
2. Nighttime sleep disturbances in Smith-Magenis Syndrome (SMS)
 - a. 16 years of age or older

AND ALL of the following:

- a. **NO** severe hepatic impairment (Child-Pugh Class C)
- b. **NO** concurrent therapy with another Prior Authorization (PA) sleep aid (see Appendix 1) or Xyrem (sodium oxybate)

Hetlioz LQ oral suspension only

Diagnosis
