## Dihydroergotamine Nasal Sprays

### Description

Migranal Nasal Spray\* (dihydroergotamine)  
Trudhesa Nasal Spray\* (dihydroergotamine)

Covered product: generic Migranal (dihydroergotamine)

\*Non-covered medications must go through prior authorization and the formulary exception process.

### Background

DHE (dihydroergotamine) is used for the treatment of migraine headache with or without aura. DHE targets receptors in both the central and the peripheral parts of the nervous system. The therapeutic activity of dihydroergotamine in migraine is generally attributed to the agonist effect at 5-HT<sub>1D</sub> receptors. Activation of 5-HT<sub>1D</sub> receptors located on intracranial blood vessels leads to vasoconstriction, which correlates with the relief of migraine headache. Most migraines are characterized by certain types of headache pain with or without other symptoms. One-sided, throbbing, pulsating head pain that can be accompanied by nausea, vomiting, and/or sensitivity to light and noise is typical of migraines. Some people may also experience aura, or visual displays, before or during attacks (1-2).

### Regulatory Status

FDA-approved indication: Dihydroergotamine Nasal Sprays are indicated for the acute treatment of migraine headaches with or without aura (1-2).

### Limitations of Use:

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2023
<b>Subsection:</b>	Analgesics and Anesthetics	<b>Original Policy Date:</b>	March 17, 2017
<b>Subject:</b>	Dihydroergotamine Nasal Spray	<b>Page:</b>	2 of 6

---

Dihydroergotamine Nasal Spray is not indicated for the preventative treatment of migraine or for the management of hemiplegic or basilar migraine (1).

Dihydroergotamine has boxed warnings for serious and/or life-threatening peripheral ischemia which has been associated with the co-administration of dihydroergotamine with potent CYP3A4 inhibitors including protease inhibitors and macrolide antibiotics. Because CYP3A4 inhibition elevates the serum levels of dihydroergotamine, the risk for vasospasm leading to cerebral ischemia and/or ischemia of the extremities is increased (1).

For the acute treatment of migraine headaches, one spray (0.5mg) of dihydroergotamine should be administered in each nostril. Fifteen minutes later, an additional one spray (0.5mg) of dihydroergotamine should be administered in each nostril, for a total dosage of four sprays (2mg) of dihydroergotamine. Studies have shown no additional benefit from acute doses greater than 2mg for a single migraine administration. The safety of doses greater than 3mg in a 24 hour period and 4mg in a seven-day period has not been established. Dihydroergotamine should not be used for chronic daily administration (1).

The recommended dose of Trudhesa is 1.45 mg administered as two metered sprays into the nose (one spray of 0.725 mg into each nostril). The dose may be repeated, if needed, a minimum of 1 hour after the first dose. Patients should not use more than 2 doses of Trudhesa within a 24-hour period or 3 doses within a 7-day period (2).

Frequent use of acute medications is generally thought to cause medication-overuse headache. To decrease the risk of medication-overuse headache (“rebound headache” or “drug-induced headache”) many experts limit acute therapy to two headache days per week on a regular basis. Based on concerns of overuse, medication-overuse headache, and withdrawal, the use of dihydroergotamine should be limited and carefully monitored. The quantity limit is set to contain treatment for up to eight headaches per month without exceeding the maximum weekly dose allowed per package insert (1-5).

The safety and effectiveness in pediatric patients less than 18 years of age have not been established (1-2).

## Policy

*This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.*

Dihydroergotamine Nasal Sprays may be considered **medically necessary** in patients 18 years of age or older with migraine headaches with or without aura and if the conditions indicated below are met.

Dihydroergotamine Nasal Sprays may be considered **investigational** in patients less than 18 years of age and for all other indications.

## Prior-Approval Requirements

**Age** 18 years of age or older

### Diagnoses

Patient must have **ONE** of the following

1. Migraine, with aura (classic or classical)
2. Migraine, without aura (common)

**AND NONE** of the following:

- a. Hemiplegic migraine
- b. Basilar migraine

**AND** the following:

- a. Inadequate treatment response, intolerance, or contraindication to **TWO** of the 5-HT<sub>1</sub> receptor agonist (triptans) alternatives

## Prior – Approval *Renewal* Requirements

**Age** 18 years of age or older

### Diagnoses

Patient must have **ONE** of the following

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2023

1. Migraine, with aura (classic or classical)
2. Migraine, without aura (common)

**AND NONE** of the following:

- a. Hemiplegic migraine
- b. Basilar migraine

### Policy Guidelines

#### Pre - PA Allowance

None

#### Prior - Approval Limits

##### Quantity

Drug	Package Size	Quantity Limit
Dihydroergotamine 4 mg/mL (generic Migranal)	8 nasal devices per kit	24 nasal devices (3 kits) per 90 days

OR

Drug with Approved Formulary Exception Only	Package Size	Quantity Limit
Migranal 4 mg/mL	8 nasal devices per kit	24 nasal devices (3 kits) per 90 days <b>OR</b>
Trudhesa 4 mg/mL	4 nasal devices per kit	40 nasal devices (10 kits) per 90 days

**Duration**                      6 months

#### Prior – Approval *Renewal* Limits

Same as above

### Rationale

#### Summary

DHE (dihydroergotamine) is used for the treatment of migraine headache with or without aura. DHE targets receptors in both the central and the peripheral parts of the nervous system. Based

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	January 1, 2023

on concerns of overuse, medication-overuse headache, and withdrawal, the use of dihydroergotamine should be limited and carefully monitored. The quantity limit is set to contain treatment for up to eight headaches per month without exceeding the maximum weekly dose allowed per package insert. Safety and effectiveness in pediatric patients have not been established (1-5).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Dihydroergotamine Nasal Spray, while maintaining optimal therapeutic outcomes.
