### Balversa

### **Description**

### Balversa (erdafitinib)

#### **Background**

Balversa (erdafitinib) is a kinase inhibitor that binds to and inhibits enzymatic activity of FGFR1, FGFR2, FGFR3, and FGFR4. Balversa inhibits FGFR phosphorylation and signaling and decreased cell viability in cell lines expressing FGFR genetic alterations, including point mutations, amplifications, and fusions. Balversa demonstrates antitumor activity in FGFR-expressing cell lines and xenograft models derived from tumor types, including bladder cancer (1).

### **Regulatory Status**

FDA-approved indication: Balversa is a kinase inhibitor indicated for the treatment of adult patients with locally advanced or metastatic urothelial carcinoma that has: (1)

- 1. Susceptible FGFR3 or FGFR2 genetic alterations and
- Progressed during or following at least one line of prior platinum-containing chemotherapy including within 12 months of neoadjuvant or adjuvant platinumcontaining chemotherapy.

Balversa can cause ocular disorders, including central serous retinopathy/retinal pigment epithelial detachment resulting in visual field defect. Patients should receive dry eye prophylaxis with ocular demulcents as needed. Monthly ophthalmological examinations should be performed monthly during the first 4 months of treatment and every 3 months afterwards, and urgently at any time for visual symptoms (1).

# 5.21.127

Section: Prescription Drugs Effective Date: January 1, 2024

Subject: Balversa Page: 2 of 4

Increases in phosphate levels are a pharmacodynamics effect of Balversa. Patients should be monitored for hyperphosphatemia and the dose should be modified when required by the guidelines (1).

Balversa can cause fetal harm when administered to a pregnant woman. Pregnant women should be advised of the potential risk to the fetus. Female patients of reproductive potential should be advised to use effective contraception during treatment with Balversa and for one month after the last dose. Male patients with female partners of reproductive potential should be advised to use effective contraception during treatment with Balversa and for one month after the last dose (1).

The safety and efficacy of Balversa in pediatric patients less than 18 years of age have not been established (1).

### Related policies

## **Policy**

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Balversa may be considered **medically necessary** if the conditions indicated below are met.

Balversa may be considered **investigational** for all other indications.

# **Prior-Approval Requirements**

Age 18 years of age or older

### **Diagnosis**

Patient must have the following:

Locally advanced or metastatic urothelial carcinoma

#### **AND ALL** of the following:

a. Susceptible FGFR3 or FGFR2 genetic alterations

Section: Prescription Drugs Effective Date: January 1, 2024

Subsection: Antineoplastic Agents Original Policy Date: April 26, 2019

Subject: Balversa Page: 3 of 4

b. Disease progression during or following at least one line of prior platinumcontaining chemotherapy

- c. Prescriber agrees to monitor phosphate levels monthly for hyperphosphatemia
- d. Prescriber agrees to monitor for ocular disorders
- e. Females of reproductive potential and males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Balversa and for one month after the last dose

# Prior - Approval Renewal Requirements

**Age** 18 years of age or older

### **Diagnosis**

Patient must have the following:

Locally advanced or metastatic urothelial carcinoma

#### **AND ALL** of the following:

- a. NO disease progression or unacceptable toxicities
- b. Prescriber agrees to monitor phosphate levels monthly for hyperphosphatemia
- c. Prescriber agrees to monitor for ocular disorders
- d. Females of reproductive potential and males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Balversa and for one month after the last dose

### **Policy Guidelines**

### **Pre - PA Allowance**

None

# **Prior - Approval Limits**

**Duration** 6 months

# Prior - Approval Renewal Limits

**Duration** 12 months

### Rationale

### **Summary**

Balversa (erdafitinib) is a kinase inhibitor that binds to and inhibits enzymatic activity of FGFR1, FGFR2, FGFR3, and FGFR4. Balversa inhibits FGFR phosphorylation and signaling and decreased cell viability in cell lines expressing FGFR genetic alterations, including point mutations, amplifications, and fusions. Balversa demonstrates antitumor activity in FGFR-expressing cell lines and xenograft models derived from tumor types, including bladder cancer. The safety and efficacy of Balversa in pediatric patients less than 18 years of age have not been established (1).

Prior approval is required to ensure the safe, clinically appropriate, and cost-effective use of Balversa while maintaining optimal therapeutic outcomes.
