Gavreto

Description

Gavreto (pralsetinib)

Background

Gavreto (pralsetinib) is a kinase inhibitor of wild-type *RET* and oncogenic *RET* fusions and mutations. Certain *RET* fusion proteins and activating point mutations can drive tumorigenic potential through hyperactivation of downstream signaling pathways leading to uncontrolled cell proliferation. Gavreto exhibits anti-tumor activity in models harboring oncogenic *RET* fusions or mutations (1).

Regulatory Status

FDA-approved indications: Gavreto is a kinase inhibitor indicated for the treatment of: (1)

- Adult patients with metastatic rearranged during transfection (*RET*) fusion-positive non-small cell lung cancer (NSCLC) as detected by an FDA approved test
- Adult and pediatric patients 12 years of age and older with advanced or metastatic *RET* fusion-positive thyroid cancer who require systemic therapy and who are radioactive iodine-refractory (if refractory iodine is appropriate)

Patients should be selected for treatment with Gavreto based on the presence of a *RET* gene fusion (NSCLC or thyroid cancer) (1).

Gavreto has warnings regarding hepatotoxicity and hypertension. AST and ALT should be monitored prior to initiating Gavreto, every 2 weeks during the first 3 months, then monthly thereafter and as clinically indicated. Gavreto should not be initiated in patients with

Subject:	Gavreto	Page:	2 of 5

uncontrolled hypertension and blood pressure should be optimized prior to initiation. Blood pressure should be monitored after 1 week, at least monthly thereafter and as clinically indicated (1).

Gavreto can cause fetal harm when administered to a pregnant woman. Females of reproductive potential should be advised to use effective non-hormonal contraception during treatment with Gavreto and for 2 weeks after the final dose. Males with female partners of reproductive potential should be advised to use effective contraception during treatment with Gavreto and for 1 week after the final dose (1).

The safety and effectiveness of Gavreto have not been established in pediatric patients less than 18 years of age with *RET* fusion-positive NSCLC or in pediatric patients less than 12 years of age with *RET* fusion-positive thyroid cancer (1).

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Gavreto may be considered **medically necessary** if the conditions indicated below are met.

Gavreto may be considered **investigational** for all other indications.

Prior-Approval Requirements

Diagnoses

Patient must have **ONE** of the following:

1. Metastatic non-small cell lung cancer (NSCLC)
 - a. 18 years of age or older
 - b. *RET* fusion-positive detected by an FDA approved test
2. Advanced or metastatic thyroid cancer
 - a. 12 years of age or older
 - b. *RET* fusion-positive and patient requires systemic therapy

Section:	Prescription Drugs	Effective Date:	April 1, 2024
Subsection:	Antineoplastic Agents	Original Policy Date:	September 25, 2020
Subject:	Gavreto	Page:	3 of 5

- c. Radioactive iodine-refractory (if radioactive iodine is appropriate)

AND ALL of the following:

- a. Prescriber agrees to monitor AST, ALT, and blood pressure
- b. Females of reproductive potential **only**: patient will be advised to use effective non-hormonal contraception during treatment with Gavreto and for 2 weeks after the final dose
- c. Males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Gavreto and for 1 week after the final dose

Prior – Approval *Renewal* Requirements

Diagnoses

Patient must have **ONE** of the following:

- 1. Metastatic non-small cell lung cancer (NSCLC)
 - a. 18 years of age or older
- 2. Advanced or metastatic thyroid cancer
 - a. 12 years of age or older

AND ALL of the following:

- a. **NO** disease progression or unacceptable toxicity
- b. Prescriber agrees to monitor AST, ALT, and blood pressure
- c. Females of reproductive potential **only**: patient will be advised to use effective non-hormonal contraception during treatment with Gavreto and for 2 weeks after the final dose
- d. Males with female partners of reproductive potential **only**: patient will be advised to use effective contraception during treatment with Gavreto and for 1 week after the final dose

Policy Guidelines

Pre - PA Allowance

None

Prior - Approval Limits

Section:	Prescription Drugs	Effective Date:	April 1, 2024
Subsection:	Antineoplastic Agents	Original Policy Date:	September 25, 2020
Subject:	Gavreto	Page:	4 of 5

Quantity 360 capsules per 90 days

Duration 12 months

Prior – Approval *Renewal* Limits

Same as above

Rationale

Summary

Gavreto (pralsetinib) is a kinase inhibitor of wild-type *RET* and oncogenic *RET* fusions and mutations. Certain *RET* fusion proteins and activating point mutations can drive tumorigenic potential through hyperactivation of downstream signaling pathways leading to uncontrolled cell proliferation. Gavreto exhibits anti-tumor activity in models harboring oncogenic *RET* fusions or mutations (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Gavreto while maintaining optimal therapeutic outcomes.
