## Opdivo Qvantig

### Description

#### Opdivo Qvantig (nivolumab and hyaluronidase-nvhy)

---

#### Background

Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) is a monoclonal antibody formulated with an endoglycosidase to allow for subcutaneous administration. Nivolumab is a programmed death receptor-1 (PD-1) blocking antibody which is indicated to treat many categories of cancer. Nivolumab can bind to the PD-1 receptor and block its interaction with programmed death receptor ligands such as PD-L1 and PD-L2 and decrease tumor growth (1).

#### Regulatory Status

FDA-approved indications: Opdivo Qvantig is a combination of nivolumab, a programmed death receptor-1 (PD-1)-blocking antibody, and hyaluronidase, an endoglycosidase, indicated for the treatment of: (1)

1. Renal Cell Carcinoma (RCC)
  - a. Adult patients with intermediate or poor risk advanced RCC, as a first-line treatment following combination treatment with intravenous nivolumab and ipilimumab.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of renal cell carcinoma.
  - b. Adult patients with advanced RCC, as a first-line treatment in combination with cabozantinib.
  - c. Adult patients with advanced RCC who have received prior anti-angiogenic therapy.
2. Melanoma

---

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	November 28, 2025
<b>Subsection:</b>	Antineoplastic Agents	<b>Original Policy Date:</b>	February 28, 2025
<b>Subject:</b>	Opdivo Qvantig	<b>Page:</b>	2 of 12

---

- a. Adult and pediatric (12 years and older who weigh 30 kg or greater) patients with unresectable or metastatic melanoma.
  - b. Adult and pediatric (12 years and older who weigh 30 kg or greater) patients with unresectable or metastatic melanoma following combination treatment with intravenous nivolumab and ipilimumab.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of unresectable or metastatic melanoma.
  - c. For the adjuvant treatment of adult and pediatric (12 years and older who weigh 30 kg or greater) patients with completely resected Stage IIB, Stage IIC, Stage III, or Stage IV melanoma.
3. Non-Small Cell Lung Cancer (NSCLC)
- a. Adult patients with resectable (tumors  $\geq 4$  cm or node positive) NSCLC in the neoadjuvant setting, in combination with platinum-doublet chemotherapy.
  - b. Adult patients with resectable (tumors  $\geq 4$  cm or node positive) NSCLC and no known EGFR mutations or ALK rearrangements, for neoadjuvant treatment, in combination with platinum-doublet chemotherapy, followed by Opdivo Qvantig monotherapy as adjuvant treatment after surgery.
  - c. Adult patients with metastatic NSCLC and progression on or after platinum-based chemotherapy. Patients with EGFR or ALK genomic tumor aberrations should have disease progression on an FDA-approved therapy for these aberrations prior to receiving Opdivo Qvantig.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of metastatic NSCLC.
4. Squamous Cell Carcinoma of the Head and Neck (SCCHN)
- a. Adult patients with recurrent or metastatic SCCHN with disease progression on or after a platinum-based therapy.
5. Urothelial Carcinoma (UC)
- a. Adjuvant treatment of adult patients with UC who are at high risk of recurrence after undergoing radical resection of UC.
  - b. Adult patients with unresectable or metastatic UC, as first-line treatment in combination with cisplatin and gemcitabine.
  - c. Adult patients with locally advanced or metastatic UC who:
    - i. Have disease progression during or following platinum-containing chemotherapy.
    - ii. Have disease progression within 12 months of neoadjuvant or adjuvant treatment with platinum-containing chemotherapy.
6. Colorectal Cancer (CRC)

---

- a. Adult and pediatric (12 years and older who weigh 30 kg or greater) patients with unresectable or metastatic microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) metastatic CRC, following combination treatment with intravenous nivolumab and ipilimumab.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of unresectable or metastatic MSI-H or dMMR CRC.
  - b. Adult and pediatric (12 years and older who weigh 30 kg or greater) patients with MSI-H or dMMR metastatic CRC that has progressed following treatment with a fluoropyrimidine, oxaliplatin, and irinotecan.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of unresectable or metastatic MSI-H or dMMR CRC.
7. Hepatocellular Carcinoma (HCC)
- a. Adult patients with unresectable or metastatic HCC, as a first-line treatment following combination treatment with intravenous nivolumab and ipilimumab.
  - b. Adult patients with unresectable or metastatic HCC, who have been previously treated with sorafenib, following combination treatment with intravenous nivolumab and ipilimumab.
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of unresectable or metastatic HCC.
8. Esophageal Cancer
- a. Adult patients with completely resected esophageal or gastroesophageal junction cancer with residual pathologic disease, who have received neoadjuvant chemoradiotherapy (CRT).
  - b. Adult patients with unresectable advanced or metastatic esophageal squamous cell carcinoma (ESCC) as first-line treatment in combination with fluoropyrimidine- and platinum-containing chemotherapy whose tumors express PD-L1 ( $\geq 1$ ).
    - i. Limitations of Use: Opdivo Qvantig is not indicated in combination with ipilimumab for the treatment of patients with unresectable advanced or metastatic ESCC.
  - c. Adult patients with unresectable advanced, recurrent, or metastatic esophageal squamous cell carcinoma (ESCC) after prior fluoropyrimidine- and platinum-based chemotherapy.
9. Gastric Cancer, Gastroesophageal Junction Cancer, and Esophageal Adenocarcinoma
- a. Adult patients with advanced or metastatic gastric cancer, gastroesophageal junction cancer, and esophageal adenocarcinoma whose tumors express PD-L1

(≥1) in combination with fluoropyrimidine- and platinum-containing chemotherapy.

Opdivo Qvantig carries warnings for immune-mediated adverse reactions, complications of allogeneic hematopoietic stem cell transplantation (HSCT), and embryo-fetal toxicity. Clinically significant immune-mediated adverse reactions may occur with Opdivo Qvantig therapy including pneumonitis, colitis, hepatitis, nephritis, renal dysfunction, hyperthyroidism, and hypothyroidism. Patients should be monitored for signs and symptoms of adverse reactions and based on the severity, Opdivo Qvantig should be withheld or discontinued, and corticosteroids administered. Opdivo Qvantig may cause fetal harm when administered to a pregnant woman. Female patients of reproductive potential should be advised of the potential hazard to a fetus (1).

The safety and effectiveness of Opdivo Qvantig have not been established in pediatric patients less than 12 years of age with melanoma or CRC. The safety and effectiveness of Opdivo Qvantig have not been established in pediatric patients less than 18 years of age with all other diagnoses (1).

### Policy

*This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.*

Opdivo Qvantig may be considered **medically necessary** if the conditions indicated below are met.

Opdivo Qvantig may be considered **investigational** for all other indications.

## Prior-Approval Requirements

### Diagnoses

Patient must have **ONE** of the following:

1. Unresectable or metastatic melanoma

---

<b>Section:</b>	Prescription Drugs	<b>Effective Date:</b>	November 28, 2025
<b>Subsection:</b>	Antineoplastic Agents	<b>Original Policy Date:</b>	February 28, 2025

---

- a. 12 years of age or older
  - b. Patient weight  $\geq$  30 kg
  - c. Used as a single agent
2. Adjuvant treatment of melanoma post resection
    - a. 12 years of age or older
    - b. Patient weight  $\geq$  30 kg
    - c. Stage IIB, Stage IIC, Stage III, or Stage IV melanoma
    - d. Used as a single agent
3. Resectable non-small cell lung cancer (NSCLC)
    - a. 18 years of age or older
    - b. Tumors  $\geq$ 4 cm **OR** node positive
    - c. Used in combination with platinum-doublet chemotherapy in the neoadjuvant setting
4. Metastatic non-small cell lung cancer (NSCLC)
    - a. 18 years of age or older
    - b. Patient has **ONE** of the following:
      - i. **NO** EGFR or ALK genomic tumor aberrations
        1. Disease progressed on or after platinum-based chemotherapy
        2. Used as a single agent
      - ii. Positive for EGFR or ALK genomic tumor aberrations
        1. Patient had disease progression on FDA approved therapy
        2. Used as a single agent
5. Advanced renal cell carcinoma
    - a. 18 years of age or older
    - b. Patient has **ONE** of the following:
      - i. First-line treatment in combination with cabozantinib
      - ii. Prior treatment with anti-angiogenic therapy
        1. Used as a single agent
      - iii. Patient is considered to have an intermediate or poor prognosis
        1. Used as first-line treatment following intravenous nivolumab in combination with ipilimumab
        2. Used as a single agent
6. Recurrent or metastatic squamous cell carcinoma of the head and neck
    - a. 18 years of age or older

---

- b. Disease must have progressed while on or after platinum-based chemotherapy
  - c. Used as a single agent
7. Urothelial carcinoma
- a. 18 years of age or older
  - b. Patient has **ONE** of the following:
    - i. Patient is at high risk of recurrence after undergoing radical resection
      - 1. Used as adjuvant treatment
      - 2. Used as a single agent
    - ii. Unresectable or metastatic urothelial carcinoma
      - 1. Used as first-line treatment in combination with cisplatin and gemcitabine
    - iii. Locally advanced or metastatic urothelial carcinoma, used as a single agent with **ONE** of the following:
      - 1. Disease must have progressed while on or after platinum-based chemotherapy
      - 2. Disease progression within 12 months of neoadjuvant or adjuvant treatment with platinum-containing chemotherapy
8. Unresectable or metastatic hepatocellular carcinoma (HCC)
- a. 18 years of age or older
  - b. Patient has **ONE** of the following:
    - i. Used as first-line treatment
    - ii. Prior treatment with sorafenib
      - 1. Following combination treatment with intravenous nivolumab and ipilimumab
      - 2. Used as a single agent
9. Completely resected esophageal or gastroesophageal junction cancer with residual pathologic disease
- a. 18 years of age or older
  - b. Patient has received neoadjuvant chemoradiotherapy (CRT)
  - c. Used as a single agent
10. Unresectable advanced or metastatic esophageal squamous cell carcinoma (ESCC)
- a. 18 years of age or older

- b. Tumors express PD-L1 as determined by an FDA-approved test
  - c. Used as first-line treatment
  - d. Used in combination with fluoropyrimidine- and platinum-containing chemotherapy
11. Unresectable advanced, recurrent, or metastatic esophageal squamous cell carcinoma (ESCC)
- a. 18 years of age or older
  - b. Prior treatment with fluoropyrimidine- and platinum-based chemotherapy
  - c. Used as a single agent
12. Microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) colorectal cancer (CRC)
- a. 12 years of age or older
  - b. Patient weight  $\geq$  30 kg
  - c. Patient has **ONE** of the following:
    - i. Unresectable or metastatic MSI-H or dMMR CRC
      - 1. Following combination treatment with intravenous nivolumab and ipilimumab
    - ii. MSI-H or dMMR metastatic CRC
      - 1. Progressed following treatment with fluoropyrimidine, oxaliplatin, and irinotecan
  - d. Diagnosis confirmed by PCR-based assay genetic testing
  - e. Used as a single agent
13. Advanced or metastatic gastric cancer, gastroesophageal junction cancer, or esophageal adenocarcinoma
- a. 18 years of age or older
  - b. Tumors express PD-L1 as determined by an FDA-approved test
  - c. Used in combination with fluoropyrimidine- and platinum-containing chemotherapy

## Policy Guidelines

### Pre - PA Allowance

None

### Prior - Approval Limits

**Duration**      6 months

### Prior – Approval *Renewal* Limits

#### Duration\*

Indication	Renewal PA Duration*	Number of Renewals Allowed
Adjuvant treatment of melanoma post resection	6 months	One renewal only
Adjuvant treatment of urothelial carcinoma (patients at high risk of recurrence after radical resection)	6 months	One renewal only
Completely resected esophageal or gastroesophageal junction cancer with residual pathological disease	6 months	One renewal only
Resectable non-small cell lung cancer (NSCLC) as adjuvant treatment after surgery	12 months	One renewal only
Advanced or metastatic gastric cancer, gastroesophageal junction cancer, and esophageal adenocarcinoma	18 months	One renewal only
Unresectable or metastatic urothelial carcinoma (first-line, in combination with cisplatin and gemcitabine)	18 months	One renewal only
Esophageal squamous cell carcinoma	18 months	<u>Used with fluoropyrimidine- and platinum-containing chemotherapy:</u> One renewal only

<b>Section:</b> Prescription Drugs	<b>Effective Date:</b> November 28, 2025
<b>Subsection:</b> Antineoplastic Agents	<b>Original Policy Date:</b> February 28, 2025
<b>Subject:</b> Opdivo Qvantig	<b>Page:</b> 11 of 12

		<u>Prior treatment with fluoropyrimidine- and platinum-based chemotherapy:</u>  Until disease progression or unacceptable toxicity
Advanced renal cell carcinoma	18 months	<u>Used with cabozantinib:</u>  One renewal only
		<u>NOT being used with cabozantinib:</u>  Until disease progression or unacceptable toxicity
<b>All other indications</b>	18 months	Until disease progression or unacceptable toxicity

**\*\*NO** renewal for resectable non-small cell lung cancer (NSCLC) used as neoadjuvant treatment

## Rationale

### Summary

Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) is a combination of a monoclonal antibody and an endoglycosidase for subcutaneous administration. Opdivo Qvantig works by binding to the programmed cell death-1 (PD-1) receptor, and blocking its interaction with PD-1 ligands, PD-L1 and PD-L2. This interaction releases the inhibitory effects of PD-1 pathway-mediated inhibition of the immune response, including the anti-tumor immune response, resulting in decreased tumor growth. Opdivo Qvantig carries warnings for immune-mediated adverse reactions, infusion-related reactions, complications of allogeneic HSCT and embryo-fetal toxicity. The safety and effectiveness of Opdivo Qvantig have not been established in pediatric patients less than 12 years of age with melanoma or CRC. The safety and effectiveness of Opdivo Qvantig have not been established in pediatric patients less than 18 years of age with all other diagnoses (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Opdivo Qvantig while maintaining optimal therapeutic outcomes.

## Policy History

Date	Action
February 2025	Addition to PA
June 2025	Annual review and reference update
July 2025	Per PI update, added requirement of tumor expressing PD-L1 for unresectable advanced or metastatic esophageal squamous cell carcinoma and gastric cancer, gastroesophageal junction cancer, and esophageal adenocarcinoma
September 2025	Annual review and reference update
November 2025	Per PI update, added indications of HCC as first-line treatment and unresectable or metastatic MSI-H or dMMR CRC. Also reduced age requirement for melanoma and CRC to 12 and older with a weight requirement
