Piqray

Description

Piqray (alpelisib)

Background

Piqray (alpelisib) is an inhibitor of phosphatidylinositol-3-kinase (PI3K) with inhibitory activity predominantly against PI3K α . In breast cancer cell lines, alpelisib inhibited the phosphorylation of PI3K downstream targets, including Akt and showed activity in cell lines harboring a PIK3CA mutation. PI3K inhibition by alpelisib treatment has been shown to induce an increase in estrogen receptor (ER) transcription in breast cancer cells. The combination of alpelisib and fulvestrant demonstrated increased anti-tumor activity compared to either treatment alone (1).

Regulatory Status

FDA-approved indication: Piqray is indicated in combination with fulvestrant for the treatment of postmenopausal women, and men, with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, PIK3CA-mutated, advanced or metastatic breast cancer as detected by an FDA-approved test following progression on or after an endocrine-based regimen (1).

Piqray has warnings regarding severe hypersensitivity, hyperglycemia, pneumonitis, diarrhea and severe cutaneous reactions. Severe cutaneous reactions, including Stevens-Johnson syndrome (SJS), erythema multiforme (EM), toxic epidermal necrolysis (TEN), and drug reaction with eosinophilia and systemic symptoms (DRESS) were reported in patients treated with Piqray (1).

Section:	Prescription Drugs	Effective Date:	July 1, 2023
Subsection:	Antineoplastic Agents	Original Policy Date:	June 21, 2019

Piqray may cause fetal harm when administered to a pregnant woman. Females of reproductive potential should be advised to use effective contraception during treatment with Piqray and for 1 week after the last dose. Male patients with female partners of reproductive potential should be advised to use condoms and effective contraception during treatment with Piqray and for 1 week after the last dose (1).

The safety and effectiveness of Piqray in pediatric patients less than 18 years of age have not been established (1).

Related policies

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Piqray may be considered **medically necessary** if the conditions indicated below are met.

Piqray may be considered **investigational** for all other indications.

Prior-Approval Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Advanced or metastatic breast cancer

AND ALL of the following:

1. Hormone receptor (HR)-positive
2. Human epidermal growth factor receptor 2 (HER2)-negative
3. PIK3CA-mutated as detected by an FDA-approved test
4. Female patients **must** be postmenopausal
5. Used in combination with fulvestrant (Faslodex)
6. Patient has had disease progression on or after an endocrine-based regimen
7. Prescriber agrees to monitor for **ALL** of the following:

Section:	Prescription Drugs	Effective Date:	July 1, 2023
Subsection:	Antineoplastic Agents	Original Policy Date:	June 21, 2019
Subject:	Piqray	Page:	3 of 5

- a. Severe cutaneous reactions, such as Stevens-Johnson syndrome (SJS) and drug reaction with eosinophilia and systemic symptoms (DRESS)
 - b. Pneumonitis
8. Prescriber agrees to monitor for elevated glucose and decrease the dose or discontinue therapy as required
9. Male patients with female partners of reproductive potential **only**: Prescriber agrees to advise patient to use condoms and effective contraception during treatment and for 1 week after the last dose

Prior – Approval *Renewal* Requirements

Age 18 years of age or older

Diagnosis

Patient must have the following:

Advanced or metastatic breast cancer

AND ALL of the following:

1. Used in combination with fulvestrant (Faslodex)
2. Female patients **must** be postmenopausal
3. **NO** disease progression or unacceptable toxicity
4. Prescriber agrees to monitor for **ALL** of the following:
 - a. Severe cutaneous reactions, such as Stevens-Johnson syndrome (SJS) and drug reaction with eosinophilia and systemic symptoms (DRESS)
 - b. Pneumonitis
5. Prescriber agrees to monitor for elevated glucose and decrease the dose or discontinue therapy as required
6. Male patients with female partners of reproductive potential **only**: Prescriber agrees to advise patient to use condoms and effective contraception during treatment and for 1 week after the last dose

Policy Guidelines

Pre - PA Allowance

None

Subject:	Piqray	Page:	4 of 5

Prior - Approval Limits

Quantity

Strength	Quantity Limit
300 mg daily dose (2 x 150 mg)	168 tablets per 84 days OR
250 mg daily dose (1 x 200 mg + 1 x 50 mg)	168 tablets per 84 days OR
200 mg daily dose (1 x 200 mg)	84 tablets per 84 days

Duration 12 months

Prior – Approval *Renewal* Limits

Same as above

Rationale

Summary

Piqray (alpelisib) is an inhibitor of phosphatidylinositol-3-kinase (PI3K) indicated in combination with fulvestrant for the treatment of postmenopausal women, and men, with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, PIK3CA-mutated, advanced or metastatic breast cancer. Piqray has warnings regarding severe hypersensitivity, hyperglycemia, pneumonitis, diarrhea, fetal harm and severe cutaneous reactions. The safety and effectiveness of Piqray in pediatric patients less than 18 years of age have not been established (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Piqray while maintaining optimal therapeutic outcomes.
